**increasing**  
**broad-spectrum efficiency**

**Swifter absorption . . . higher blood  
levels . . . more prolonged activity**

Such are the special merits of ACHROMYCIN V, the new Lederle presentation of tetracycline *plus* sodium metaphosphate. This latter constituent materially aids absorption of the antibiotic and thus secures the greatest possible benefits of true broad-spectrum therapy. As a result, ACHROMYCIN V places new power in your hands with which to combat infection.

**ACHROMYCIN<sup>\*</sup>**  
TETRACYCLINE WITH SODIUM METAPHOSPHATE

\*REGD. TRADE MARK

**CAPSULES**—(250 mg. tetracycline; 380 mg. sodium metaphosphate):  
Bottles of 16 and 100.

**SYRUP**—Orange flavoured 125 mg. tetracycline HCl activity,  
phosphate buffered, per teaspoonful (5cc) Bottles of 2 and 16 fl. oz.

risk of  
reducing

# PRELUDIN

brand of 2-phenyl-3-methyl-tetrahydro-1,4-oxazine-hydrochloride

**\*PRELUDIN—the appetite controlling agent that doesn't affect the heart.** PRELUDIN, because it has no untoward effect on the heart, is the safest possible weight-reducing treatment for all obese patients—particularly those with cardiovascular disorders or hypertension. Here, for the first time, is a powerful appetite controlling agent that curbs the appetite, breaks the psychogenic overeating habit, and controls food intake without serious side effects.

It enables the patient to lose weight safely and without mental strain by strengthening adherence to a prescribed diet. PRELUDIN in recommended dosage, unlike dexamphetamine, does not raise the blood pressure and does not create excessive mental stimulation. It is the prescription of choice in all cases of obesity—especially those with cardiovascular disorders—because it reduces the risk of reducing.

**Preludin—the safe prescription for obesity**

Manufactured by Pfizer Ltd., for  
C. H. Boehringer Sohn, Ingelheim am Rhein

the  
changing  
pattern  
of  
**SULPHONAMIDE**  
therapy

One tablet daily—where eight were previously needed. Such is the dramatic dosage reduction made possible by LEDERKYN sulphamethoxy-pyridazine—the first long-acting sulphonamide to be available for clinical use. When given at the recommended maintenance dosage of  $\frac{1}{2}$  Gm. daily, LEDERKYN secures highly satisfactory levels in the blood, tissues, spinal fluid and urine. Because of this remarkably low dosage, the risk of unwanted side effects is reduced to the minimum. Available in tablet form, LEDERKYN is suitably prescribed in all sulphonamide-sensitive infections.
